

AMENDMENTS TO THE CLAIMS

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims

Claims 1-17 (cancelled)

Claim 18 (new): A localization system, comprising:
means for generating an energy field, wherein the energy field is formed by one or
more pulse streams,

at least one disrupting means for locally disrupting the energy field,
detection means for detecting the local disruption of the energy field, and
a control unit coupled to the detection means for localizing the disrupting means
on the basis of the detected local disruption,
wherein the means for generating the energy field are adapted to transmit pulse beams of a
plurality of pulse streams, wherein at least two pulse streams of a pulse beam are oriented at least
substantially parallel to each other.

Claim 19 (new): The localization system as claimed in claim 18, wherein
each pulse beam comprises nine pulse streams, which pulse streams are oriented at least
substantially parallel to each other.

Claim 20 (new): The localization system as claimed in claim 18, wherein the
disrupting means is arranged on at least one object.

Claim 21 (new): The localization system as claimed in claim 18, wherein the
disrupting means is arranged on an animal.

Claim 22 (new): The localization system as claimed in claim 21, wherein the disrupting means is arranged on a person.

Claim 23 (new): The localization system as claimed in claim 18, wherein the disrupting means is adapted to disrupt the energy field in unique manner.

Claim 24 (new): The localization system as claimed in claim 18, wherein the disrupting means is adapted to reflect the pulse streams.

Claim 25 (new): The localization system as claimed in claim 18, wherein the disrupting means is adapted to influence the pulse streams.

Claim 26 (new): The localization system as claimed in claim 18, wherein the disrupting means is formed by a chip.

Claim 27 (new): The localization system as claimed in claim 18, wherein the disrupting means is formed by a coating.

Claim 28 (new): The localization system as claimed in claim 18, wherein the localization system is provided with visual means communicating with the control unit for displaying the location of the detected disrupting means.

Claim 29 (new): The localization system as claimed in claim 28, wherein the communication between the control unit and the visual means takes place wirelessly via electromagnetic radiation.

Claim 30 (new): The localization system as claimed in claim 28, wherein the communication between the control unit and the visual means takes place wirelessly via pulse streams.

Claim 31 (new): A method for localizing objects or animals, comprising the steps of:

- A) generating an energy field, wherein the energy field is formed by one or more pulse streams, wherein at least two pulse streams are oriented at least substantially parallel to each other,
- B) placing in the energy field at least one object or animal provided with at least one disrupting means for locally disrupting the energy field,
- C) detecting the local disruption of the energy field, and
- D) localizing the object or animal on the basis of the detected local disruption.

Claim 32 (new): The method as claimed in claim 31, wherein the method is provided with a step E) comprising of visualizing the location of the object or animal after localizing the object or animal on the basis of the detected local disruption as according to step D).

Claim 33 (new): The method as claimed in claim 31, wherein while step B) is being performed a person provided with at least one disrupting means is placed in the energy field to locally disrupt the energy field.
